

## NMED-3020 project 2 reflection

My role in this project was mainly camera operation. When recording the plates I was the one setting up and recording with the cameras while others also chipped in and gave input on the shot overall. I also was the one the did the most of the planning for getting together to shoot and check out equipment.

Maxenne was in charge of a lot of the pre-production like storyboards and shot planning. She also helped out with whatever needed extra hands like lighting. She always showed up on time and communicated well with the rest of the group. 5/5

Eveie was in charge of lighting for the greenscreen shoots as well as helping with the plates. She always showed up on time and communicated well with the group 5/5

Em was our actor and did very well with understanding what shot we wanted to get.

The pre-production phase was definitely the hardest process of the assignment for me as it was hard to come up with a story that we wanted to do and plan the shots for them. We had to stay on campus so it was difficult finding locations that would fit that we could record from campus. The production process went fairly smoothly as we all had a grasp of each other's schedules and planned around them to allot ourselves the right amount of time. I learned that a lot of time needs to be spent figuring out the full shot beforehand and this was one of the only things that was a roadblock in the production stage as we didn't have a full outlined shot beforehand. This made us improvise a bit when recording the greenscreen footage, but it helped that we had the production cart so we could do side by side comparisons of the footage. Finally the post production largely went smoothly, but the biggest problem I encountered was that Em had long hair that sometimes didn't compose well. This led to the hair looking off a lot when trying to adjust the keylight settings. In the future It would be wise to

have an actor with short dark hair. This was unavoidable however in my group as we all have long hair and two of us are blond.
